<p>$6 + 4 = 10$</p> <p>Counting on using pictures</p>  <p>6 4</p> <p>Counting on using a number line:</p> 	<p>$12 + 5 = 17$</p>  <p>12 13 14 15 16 17</p> <p>Empty number line:</p> 	<p>$13 + 28 = 41$</p> <p>Adding tens first then units And recombining:</p> <p>$20 + 10 = 30$ $8 + 3 = 11$ $30 + 11 = 41$</p> <p>Using a number line with partitioning, add on tens then units:</p> 	<p>$141 + 52 = 193$</p>  <p>Bridging through 10:</p> <p>$86 + 57 = 143$</p> 	<p>1. Introduce with expanded working, by partitioning the numbers: Start with 2 digit numbers:</p> <p>$47 + 76$</p> <p>$40 + 7$ $70 + 6$ $110 + 13 = 123$</p> <p>Extend to 3 digit numbers: $368 + 493$</p> <p>$300 + 60 + 8$ $400 + 90 + 3$ $700 + 150 + 11 = 861$</p> <p>2. Now use expanded working but without partitioning:</p> <table><tr><td>HTU 47 + 76 13 (7+6) 110 (40+70) 123</td><td>HTU 368 + 493 11 (8+3) 150 (60+90) 700 (300+400) 861</td></tr></table> <p>-Brackets could be removed in time.</p> <p>3. Final stage – contract the working to a compact, efficient form</p> <table><tr><td>HTU 47 + 76 123 11</td><td>HTU 368 + 493 861 11</td></tr></table> <p>4. Extend to larger numbers and decimals.</p>	HTU 47 + 76 13 (7+6) 110 (40+70) 123	HTU 368 + 493 11 (8+3) 150 (60+90) 700 (300+400) 861	HTU 47 + 76 123 11	HTU 368 + 493 861 11
HTU 47 + 76 13 (7+6) 110 (40+70) 123	HTU 368 + 493 11 (8+3) 150 (60+90) 700 (300+400) 861							
HTU 47 + 76 123 11	HTU 368 + 493 861 11

Using representations	Repeated Addition	Arrays	Grid Method	Column Multiplication																																																																		
3 lots of 2 is 6 	Counting in twos, fives , etc $5 \times 5 = 5 + 5 + 5 + 5 + 5$  Supported by apparatus. Or 2×6 $6 + 6 = 12$ 	$7 \times 5 = 35$  $5 \times 7 = 35$  Children also understand the commutative law: Use examples such as $6 \times 4 = 4 \times 6$	1. Start by multiplying 2 digit numbers by 1 digit numbers: 38×7 <table border="1" data-bbox="1104 419 1328 485"><tr><td>x</td><td>30</td><td>8</td></tr><tr><td>7</td><td>210</td><td>56</td></tr></table> = 266 (Children use knowledge that $7 \times 3 = 21$ and then multiply 21 by 10 to work out answer to 7×30). Move on to multiplying 3 digit numbers by 1 digit numbers. 425×6 <table border="1" data-bbox="1104 812 1453 876"><tr><td>x</td><td>400</td><td>20</td><td>5</td></tr><tr><td>6</td><td>2400</td><td>120</td><td>30</td></tr></table> = 2550 (Children use knowledge that $6 \times 4 = 24$ and then multiply 24 by 100 to work out answer to 6×400). 2. Extend to multiplying by 2 digit numbers and decimals: 56×27 <table border="1" data-bbox="1104 1169 1352 1265"><tr><td>x</td><td>50</td><td>6</td></tr><tr><td>20</td><td>1000</td><td>120</td></tr><tr><td>7</td><td>350</td><td>42</td></tr></table> = 1120 + 392 1512 1	x	30	8	7	210	56	x	400	20	5	6	2400	120	30	x	50	6	20	1000	120	7	350	42	1. Start with expanded notation working ensuring clear links to the grid method: 63×34 <table data-bbox="1554 419 2033 676"><tr><td>63</td><td>x</td><td></td><td></td><td></td></tr><tr><td>34</td><td></td><td></td><td></td><td></td></tr><tr><td>12</td><td>(4x3)</td><td></td><td></td><td></td></tr><tr><td>240</td><td>(4x60)</td><td></td><td></td><td></td></tr><tr><td>90</td><td>(30x3)</td><td></td><td></td><td></td></tr><tr><td>+ 1800</td><td>(30x60)</td><td></td><td></td><td></td></tr><tr><td>2142</td><td></td><td></td><td></td><td></td></tr></table> 2. Once children are confident, move to short multiplication. Continue to make links with the grid method:  3. Move to short multiplication with decimal numbers. Continue to make links with grid strategies): <table data-bbox="1498 979 1890 1059"><tr><td>x</td><td>20</td><td>2</td><td>0.6</td></tr><tr><td>4</td><td>80</td><td>8</td><td>2.4</td></tr></table> $80 + 8 + 2.4 = 90.4$  4. Extend to long multiplication with larger numbers and decimals:  	63	x				34					12	(4x3)				240	(4x60)				90	(30x3)				+ 1800	(30x60)				2142					x	20	2	0.6	4	80	8	2.4

Informal methods	Informal methods	Towards formal methods	Formal methods
Sharing	Grouping	Chunking	Bus Stop
<p>$15 \div 5 = 3$ Question: 5 people share 15 sweets equally. How many does each person get?</p>  <p>Each child gets 3 sweets.</p> <p>$36 \div 3 = 12$ Question: A class of 36 split into 3 equal teams. How many are in each team?</p>  <p>Each team has 12 children in it.</p> <p>$241 \div 4 = 60 \text{ r } 1$</p>  <p>60 with 1 left over</p>	<p>$15 \div 5 = 3$ Question: How many bags of 5 sweets can you make with 15 sweets?</p>  <p>Grouping on a number line: $24 \div 4 = 6$ Question: How many groups of 4 children in a class of 24?</p>  <p>$379 \div 5 = 75 \text{ r } 4$ Grouping towards the target number from zero:</p>  <p>or</p> <p>Grouping backwards from the target number towards zero:</p> 	<p>The written methods used are based on the idea of repeated subtraction eg to solve $20 \div 5$ we can think of it as $20 - 5 - 5 - 5 - 5$. Five multiplied by 4 is 20 or there are four fives in twenty. For bigger numbers we need to take off bigger chunks in order for this to be an efficient method.</p>  <p>$63 \div 4 = 15 \text{ r } 3$</p> <p>Develop this strategy with the vertical number line.</p> <p>Children can then move on to whatever size chunks they feel confident with.</p> <p>$256 \div 7$</p>  <p>$= 36 \text{ r } 4$</p>	<p>This final stage contracts the working to a compact, efficient form:</p> <p>$196 \div 4 = 32 \text{ r } 4$ This can be represented using place value counters and also extended to use fractions in the remainders:</p>  <p>Children aim to choose the largest possible multiples of 100, 10 and then as 1 as appropriate: $972 \div 36 = 27$</p>  <p>Move to short division with the remainder as a whole number or fraction.</p> <p>$98 \div 7$ becomes 14 $432 \div 5$ becomes $86 \text{ r } 2$ $496 \div 11$ becomes $45 \frac{1}{11}$</p> <p>Next, move to short division with decimals in contexts:</p>  <p>Extend to long division with the remainders as a whole number, fraction or a decimal:</p> <p>$432 \div 15$ becomes $28 \text{ r } 12$ $432 \div 15$ becomes $28 \frac{4}{5}$ $432 \div 15$ becomes 28.8</p>
